

Conway Nelson P.Eng, B.Sc, PMP

Vice-President, Project Development & Advisory Services

At the International CCS Knowledge Centre (Knowledge Centre), Conway oversees the team of engineers and project specialists that work on advancing carbon capture technology for second-generation and industrial application. A key focus for Conway is an emphasis on continuous improvement and optimization.

Prior to joining the Knowledge Centre, Conway worked at SaskPower where his career spanned over two decades, most recently in the role of Manager, at the Power Production Project Delivery Office. His experience at SaskPower includes leading and managing large teams of project managers and project control specialists to deliver sustained power production as well as new generation projects ensuring effective project delivery.

Along with his depth of engineering expertise, Conway brings a formidable strength in project management, people management, leadership, and corporate improvement initiatives. He is comfortable working with multiple and complex projects ensuring effective project delivery whilst also fostering strong relationships with across engineering, operations, and support services team members.

Conway has his B.Sc. in Mechanical Engineering, from the University of Saskatchewan and his Project Management Professional designation from the Project Management Institute.
