

Canada's CCUS sector continues to see growth and advancement of CCUS projects in 2026. Globally, Canada has the third most CCUS projects in development after the United States and United Kingdom.

80% of developing capture projects are being built in Alberta, 9% in Saskatchewan, and the remainder in BC, Manitoba, Ontario and Quebec. Explore the latest CCUS projects across Canada with our interactive map located on our website.

Key
Statistics

Carbon Capture Projects

4.6 Mtpa

Of CO₂ capture capacity from operating facilities

8

Operating capture facilities

4

Capture facilities under construction

42

Planned capture facilities

Transportation Infrastructure

464 km

Of operating CO₂ pipeline infrastructure

>13 Mtpa

Of CO₂ transport capacity available in existing pipelines

7

Large CO₂ pipeline projects in development

Carbon Storage

6

Operating dedicated CO₂ storage sites

4

Operating CO₂ Enhanced Oil Recovery (EOR) sites

13

New carbon storage hubs with rights to store CO₂ in AB and SK

30

Dedicated CO₂ storage sites are being planned or developed

389 Gt

Of estimated dedicated CO₂ storage potential in Western Canada

1.1 Gt

Of estimated CO₂ EOR potential in Western Canada

Canada's Carbon Scorecard

24.7 Mt

OF CO₂ CAPTURED AS OF APRIL 2026

Equivalent to removing 5.4 million cars from the road for one year

69.7 Mt

OF CO₂ STORED AS OF APRIL 2026

Canada has stored 45 million tonnes of CO₂ captured in the USA

Approximate Total of CO₂ Stored in Canada

How Canada Stacks Up

1.5%

Of global CO₂ emissions come from Canada ¹

6.7%

Of global CO₂ capture capacity is located in Canada ²

~17X

Increase in annual CO₂ point-source capture capacity is needed to meet the Canada Energy Regulator's Canada Net Zero Scenario ³

Direct Air Capture (DAC)

- World's first DAC innovation and commercialization center, Deep Sky Alpha, located in Innisfail, Alberta, began capturing and injecting CO₂ in 2025
- 27 DAC companies are active in Canada

Capital Funding

- Until 2035, the Carbon Capture, Utilization and Storage Investment Tax Credit covers up to:
 - 50% of capital expenditures for point-source CO₂ capture
 - 60% of capital expenditures for DAC
 - 37.5% of capital expenditures for transportation and storage
 - EOR is an eligible use, set at one half of the standard rates
- Alberta ACCIP program covers up to 12% of CCUS project capital expenditures
- Saskatchewan OGPII program provides royalty credits of up to 15% of capital expenditures (max \$75 million)

Carbon Offset Opportunities

- Canada's headline CO₂ price is \$95/tonne for industrial emitters in 2026
- CCUS projects can generate compliance offset credits in Alberta, Saskatchewan, and British Columbia
- CCUS projects that reduce upstream fossil fuel emissions can generate offset credits under BC's Low Carbon Fuel Standard or Canada's Clean Fuel Regulation
